# Get Company Members

How to use the company members endpoint to retrieve member information.

The company members endpoint retrieves the name, email address, and other details for a member of your company using the parameters you choose.

## Parameters

You can use one or more than one parameter at a time.

Parameter	Description	Example
Email	Find out the name of a member who has a specific email address.	Find a member with the email address <code>jd@company.com</code> .
Locked	Find out which members are active or deactivated. A deactivated member cannot log into the system and, therefore, cannot access anything. To do this, enter <b>true</b> for active members and <b>false</b> for deactivated members.	Find deactivated members.
maxInteractions	Find out which members have accessed the company's MURAL account no more than a specified number of times in the last three months.	Find members who have accessed the company's MURAL account at most four times in the last three months.
minInteractions	Find out which members have accessed the company's MURAL account no less than a specified number of times in the last three months.	Find members who have accessed the company's MURAL account at least five times in the last three months.

### TABLE OF CONTENTS

Parameters

Testing the company members endpoint

Example: Getting a company member by email

Example: Getting company members seen within a date range

Example: Getting a list of QEMs

lastSeenAfter	Find out which members have logged in after a date that you specify. Use the date format, YYYY-MM-DD.	Find members who have logged in after October 19, 2020.
lastSeenBefore	Find out which members have logged in before a date that you specify. Use the date format, YYYY-MM-DD.	Find members who have logged in before December 3, 2020.
organic	Find out which members were brought into MURAL via an invitation link (organic members) and which members were added by admins (non-organic members)	Find organic members.

## Testing the company members endpoint

### How to use these examples

Each use case below contains an example using the MURAL Developer Portal [API Reference](#).

Along with the walkthrough steps, you can click the tabs at the top of the example window to view the generated code in different languages. You'll find example code in cURL, Node, Ruby, Javascript, and Python.

**Note:** You'll need to use a valid API key to follow these examples and generate a response. See [Create API Keys](#) for more information.

## Example: Getting a company member by email

Get company members with a specific email address.

### Test this example

1. In the [API Reference](#), click **Deprovisioning > Get a list of company members** on the left.
2. Next to the **Try It** button, click the **authentication** icon.
3. In the **Authorization box**, enter `apikey` followed by a space and your API key.
4. In the **email** field, enter the email address you want to use.
5. Click **Try It**
